

MODEL TECHNICAL SPECIFICATION

Sapelli Pro Sports Edition - Navy & Claret

Professional billiard table with solid-wood rail standard - 7, 8, 9, 10 and 12 ft

Model overview

The Navy & Claret variant combines Sapelli's professional table platform with a distinctive sports colour composition.

7 / 8 / 9 / 10 / 12 ft	MARMARA: 30 / 40 / 50 / 60 mm	IMPORTED BUFFALO K66
------------------------	-------------------------------	----------------------

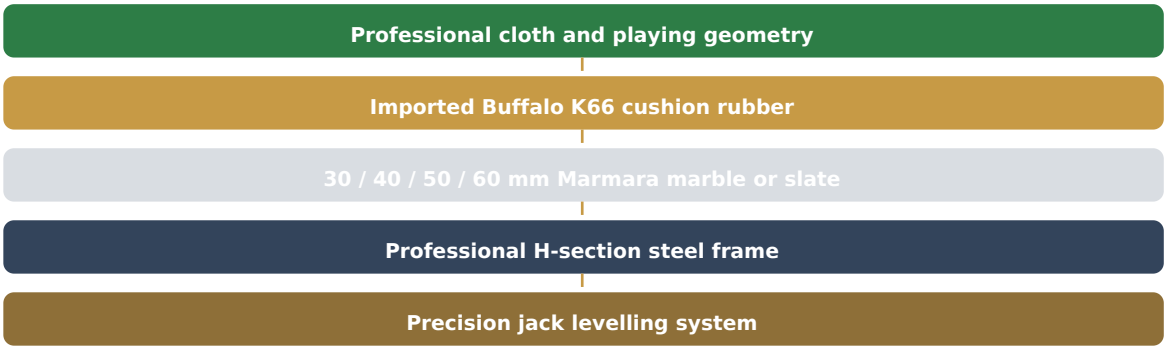

External dimensions are model-dependent approximations. Final dimensions, cabinet/apron material, pocket system, discipline, bed choice, colour, accessories and installation scope are confirmed in the pre-order technical approval.

Size and playing-standard options

External dimensions are approximate and vary with rail and apron geometry. Final production dimensions are confirmed in the order specification.

Size	Clear playing area	Approx. external size	Height	Recommended discipline	Bed sections	Recommended minimum room
7 ft	1980 x 990 mm	2380 x 1350 mm	780-800 mm	American pool / home	3	4980 x 3990 mm
8 ft	2337 x 1168 mm	2670 x 1500 mm	780-800 mm	American / commercial	3	5340 x 4170 mm
9 ft	2540 x 1270 mm	2880 x 1570 mm	780-800 mm	American tournament	3	5540 x 4270 mm
10 ft	2840 x 1420 mm	3180 x 1760 mm	780-800 mm	Carom / Russian / bespoke	3 / 5	5840 x 4420 mm
12 ft	3569 x 1778 mm	3860 x 2080 mm	864 mm	Snooker	5	6570 x 4780 mm

Professional structural layers

The 9 ft American tournament playing area references WPA equipment dimensions; the 12 ft snooker playing area and height reference the official WPBSA rules. Other sizes are Sapelli project standards.

Technical details and manufacturing standard

The following system is the shared professional foundation of Sapelli billiard tables. The rail standard is constant; the cabinet and apron recipe is stated explicitly in the model-specific technical order approval.

01 Solid-wood rails - no MDF

MDF is never used in the rails. Every rail is manufactured from selected solid Ayous, solid Sapelli or a project-approved equivalent hardwood. A special epoxy protection system minimizes water and humidity effects and helps preserve surface quality for years; grain, moisture balance and stability are checked before production.

02 Model-specific cabinet and apron recipe

Unlike the fixed rail standard, cabinets and aprons may use solid wood, Starwood special MDF Lam, epoxy-protected raw MDF or metal components according to the model. The actual recipe, finish and protection system are stated in the quotation and technical order approval; no model is described as having an all-solid cabinet unless that is the approved build.

03 Professional H-section steel frame

The size-specific cross-braced H-section steel carrier is prepared with epoxy coating, moisture protection and precision connection geometry. A two-piece interlocking frame is available for export projects.

04 30 / 40 / 50 / 60 mm Marmara marble or slate

Depending on table size, discipline and structural design, the preferred Marmara marble thickness is 30, 40, 50 or 60 mm, with two-face machining, precision grinding and flush joints on the frame. Imported slate is available by client choice or international specification.

05 Imported Buffalo K66 cushion rubber

The standard recipe uses imported Buffalo K66-profile cushion rubber. Cutting angle, bonding surface, nose height and ball response are calibrated for the selected discipline; another professional option is used only when stated in the technical order approval.

06 Professional cloth and playing geometry

American pool uses ProMatch tournament grade or an approved professional equivalent; snooker uses Strachan or an approved equivalent. Pocket cuts, sight alignment and cushion nose height follow the selected discipline.

07 Pockets, metalwork and sights

Pool and snooker builds use six professional pockets, model-specific metalwork and bucket or net systems; carom builds are pocketless. Diamond sights are aligned to professional playing geometry.

08 Precision jack levelling system

Adjustable jacks, aluminium or brass foot plates and load-distributing legs provide two-axis precision levelling followed by a final play test.

09 CNC reference, master craftsmanship and surface protection

Rails and joints are CNC-referenced; assembly, levelling, carving, inlay, sanding, patina, polishing and final fit are completed under master supervision according to the model recipe.

Quality control and delivery standard

✓	Frame alignment, weld and connector inspection
✓	Bed flatness, joint and deflection inspection
✓	Cushion nose height and rebound test
✓	Pocket cut, sight alignment and playing geometry
✓	Two-axis precision levelling and final play test
✓	Finish, polish, metalwork and packaging inspection

Project options and delivery scope

- Bespoke 7-12 ft production for American pool, carom, snooker or Russian billiards
- Choice of solid wood, colour, patina, metalwork, cloth and pocket treatment
- Removable dining top and protective interlayer on convertible home models
- Professional delivery and installation in Turkey; export-ready dismantled pallet packing

Standard accessory package

The standard handover package includes an Aramith ball set, 4 DBS cues, wooden triangle, 12 Master chucks, wall cue rack and care/handover set. Contents are finalized by discipline and order form.

Warranty and lead time

The manufacturer warranty is 20 years; cloth, cushion rubber, pockets, other consumables and user-caused deformation are excluded. Warranty and final lead time are stated in the model-specific technical approval.

Technical approval note

External dimensions are model-dependent approximations. Final dimensions, cabinet/apron material, pocket system, discipline, bed choice, colour, accessories and installation scope are confirmed in the pre-order technical approval.

Technical references

The 9 ft American tournament playing area references WPA equipment dimensions; the 12 ft snooker playing area and height reference the official WPBSA rules. Other sizes are Sapelli project standards.
